The speed-to-lead *playbook*

Your new lead isn't waiting. They're filling out forms with other firms. This page shows what to measure, and how to take follow-up off your agents' memory and put it on rules.

STEP 1 · MEASURE IT

- [ ] **Minutes from form or ad lead to first call**, for every source: Google Ads, Meta, LSA, web forms.
- [ ] **Leads never called** this week.
- [ ] **Attempts per lead** before the team gives up.
- [ ] **Contact rate**: leads reached ÷ leads received.
- [ ] **Sign-up rate by response time**: called within 5 minutes vs. after an hour.

STEP 2 · SET THE RULES

- [ ] **One owner** for speed to lead, reviewed every week.
- [ ] **New leads route instantly** to the dialer, not to an inbox.
- [ ] **The cadence is written down**, and it changes by rule, not by mood.

STEP 3 · LET THE DIALER FOLLOW UP

ATTEMPT	WHEN	HOW
1	Instantly	Call + text
2	+5 minutes	Call
3	+30 minutes	Call + text
4	+2 hours	Call
5	Next morning	Call + email
6	Day 3	Call + text

Example cadence. Tune it to your practice area, hours and texting consent rules, and adjust it in real time as you see what connects.

YOUR NUMBERS

SOURCE	AVG. MINUTES TO FIRST CALL	ATTEMPTS
Google Ads		
Meta		
LSA		
Web forms		

No excuses. Just logic.

Free intake assessment, with a detailed report on the true findings, so you know exactly what to fix first.
